MEDITEL[®]

MEDIA STUDIO

**INFOTAINMENT, COMMUNICATIONS,
HEALTH EDUCATION, SURVEYS
BEDSIDE AGENTS & CALL CENTRE**

Meditel Media Studio is quickly setting the standard in the healthcare industry by offering innovative applications and features that have been specifically designed to accommodate a patient's day-to-day Infotainment, Communication, Health Education and Interactive needs.

**INFOTAINMENT, COMMUNICATIONS,
HEALTH EDUCATION, SURVEYS
BEDSIDE AGENTS & CALL CENTRE**

Large Screen TV Media Terminal & TV Remote Pillow Speaker with Built-in QWERTY Keyboard

User-friendly processes help transform patient tasks into an efficient dynamic state-of-the-art patient user experience. The media or data content can be viewed on a Bedside Touchscreen TV Media Terminal or a foot-wall mounted Large Screen TV Media Terminal.

These applications include Prescribed, Scheduled and On-demand Patient Health Education with Interactive Comprehension Questionnaires to evaluate patient's knowledge and management of their medical conditions, how to avoid complications and re-admissions to the hospital. Other applications include Patient Satisfaction Surveys, Relaxation Videos and other rich TV, Movie and Internet media content and services.

These patient centric multimedia interactive applications are unparalleled in the industry and can be delivered to patients through patient self-rental automated processes, bedside and call centre agents in long-term healthcare facilities, dialysis units, clinics and hospital environments.

The Meditel Media Studio drives patient satisfaction and patient empowerment to a whole new level in addition to reducing the anxiety, boredom and stress often associated with a hospital visit or stay while reducing staff involvement.

Innovative Applications for Patients at Bedside

Bedside Touchscreen TV Media Terminal with Built-In VoIP Telephone & TV Remote

Simple intuitive menu process with its easily identifiable icons, descriptive on-screen text prompts, oversized menu keys developed for both Touchscreen and Pillow Speaker processing, enables patients to navigate to their desired applications quickly and efficiently.
