Interactive Media Delivery System Topologies

PatientLogix™ On-Demand Media Delivery System Is a cost-effective means of delivering important Health Educational media to patients through a telephone controlled on-demand television system. This system is designed with low-cost hardware and software components that easily attach to the existing coaxial and telephone system, providing video on-demand, questionnaires, surveys and a wide range of patient education applications.

PatientLogix™ Prescribed Media Delivery System With its in-room pillow speaker navigation this system provides the ultimate in patient in-room TV Health Education media delivery. It utilizes narrow-casting prescriptive processes which enables doctors and clinicians to deliver prescribed Health Educational media directly to the patient's in-room television in a compelling video format. Follow-up Comprehensive Questionnaires, Patient Satisfaction Surveys and a wide range of other patient Health Education applications can drive patient comprehension to their highest levels with the right content, to the right patient, in the right place, at the right time.

PatientLogix™ Media Studio Delivery Technology PatientLogix™ Media Studio Delivery Systems are a Cloud-based solutions, where data is stored in a SQL database that can be easily accessed by authorized personnel for reporting purposes. The system although cost-effective, provides features typically found in more complex and costly solutions. At no time is patient privacy or confidential medical records at risk of being compromised.
